

CYBER SECURITY

SAFETY THROUGH KNOWLEDGE

84%

A survey by independent satellite communications provider, NSSLGlobal, has revealed that 84% of crewmembers claim to have received limited or no cyber security training from their employers.

64%

Although 64% of crews accept responsibility for security of on-board IT systems, the vast majority of maritime employers do not help crews understand the risks they face, and how to parry them.

HUMAN FACTOR

With the majority of attacks being targeted at people rather than IT infrastructure, the 'human factor' is widely considered to be the biggest risk in cyber security at sea.

WWW.SEAGULL.NO

Cyber security is widely recognised as a problem throughout many industries, Seagull now offers an immediate solution to help you train your staff to be cyber secure.
